README.txt	[egs] Add "formosa_speech" recipe (Taiwanese Mandarin ASR) (#2474)	8 months ago

README.txt

```
### Welcome to the demo recipe of the Formosa Speech in the Wild (FSW) Project ###

The language habits of Taiwanese people are different from other Mandarin speakers (both accents and cultures) [1]. Especially
Tainwaese use tranditional Chinese characters, i.e., 繁體中文). To address this issue, a Taiwanese speech corpus collection project
"Formosa Speech in the Wild (FSW)" was initiated in 2017 to improve the development of Taiwanese-specific speech recognition
techniques.

FSW corpus will be a large-scale database of real-Life/multi-gene Taiwanese Spontaneous speech collected and transcribed from
various sources (radio, TV, open courses, etc.). To demostrate that this database is a reasonable data resource for Taiwanese
spontaneous speech recognition research, a baseline recipe is provied here for everybody, especially students, to develop their
own systems easily and quickly.

This recipe is based on the "NER-Trs-Vol1" corpus (about 150 hours broadcast radio speech selected from FSW). For more details,
please visit:
* Formosa Speech in the Wild (FSW) project (https://sites.google.com/speech.ntut.edu.tw/fsw)

If you want to apply the NER-Trs-Vol1 corpus, please contact Yuan-Fu Liao (廖元甫) via "yfliao@mail.ntut.edu.tw". This corpus is
only for non-commercial research/education use and will be distributed via our GitLab server in https://speech.nchc.org.tw.

Any bug, errors, comments or suggestions are very welcomed.

Yuan-Fu Liao (廖元甫)

.............
[1] The languages of Taiwan consist of several varieties of languages under families of the Austronesian languages and the Sino-
Tibetan languages. Taiwanese Mandarin, Hokkien, Hakka and Formosan languages are used by 83.5%, 81.9%, 6.6% and 1.4% of the
population respectively (2010). Given the prevalent use of Taiwanese Hokkien, the Mandarin spoken in Taiwan has been to a great
extent influenced by it.
